CODEBOOK DISPLAY NOTES

PATH STUDY

WEIGHTS FILE

ICPSR #36498-6712

1. ICPSR customized the display of variables in this codebook. There are no variables that contain a frequency table displaying value labels and unweighted counts. This is because all of the variables in this file are identification, sample design, or sampling weight variables for which univariate statistics are not meaningful.
2. Each variable contains the following statement:

“This variable has XXXXX valid cases out of XXXXX total cases.”

This statement describes the number of valid cases for a variable that would be used in the calculation of percentages in the frequency tables.

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
